The thepdfnumber package

Heiko Oberdiek*

2016/05/16 v1.1

Abstract

The package converts real numbers to a minimal representation that is stripped from leading or trailing zeros, plus signs and decimal point if not necessary.

6 Index 17

1 Documentation

1.1 Introduction

Dealing with the PDF format, there is sometimes the need to write some low level PDF stuff. In case of numbers, the numbers can arise from user input (e.g. color or transparency specifications) or can be calculated. For example, LATEX's \strip@pt makes a good job to output a real number. It automatically suppresses the decimal part if the number is an integer. However it leaves a leading zero for numbers greater zero and smaller one. Thus the package provides macros that can be used with different formats, even with iniTEX and generates numbers that are valid numbers of the PDF format and whose length is minimal.

1.2 Usage

The package thepdfnumber can be used with LATEX, plain TEX or even with iniTEX:

```
\RequirePackage{thepdfnumber} % \( \mathbb{L}^{A}T_{E}X \\ \) input thepdfnumber.sty \( \mathbb{N} \) plain \( T_{E}X / iniT_{E}X \\ \)
```

The package does not need and have package options.

1.3 User macros

All user macros are expandable in exact two expansion steps.

```
\thepdfnumber \{\langle number \rangle\}
```

Macro \thepdfnumber takes a number as argument and expands to a minimal representation of that number. Some examples:

```
1.: +123
                      \rightarrow 123
2.: --123
                     \rightarrow 123
3.: -01
                      \rightarrow -1
4.: 0045
                      \rightarrow 45
5.: 1.0
                      \rightarrow 1
6.: 1.20
                     \rightarrow 1.2
7.: 0.0
                     \rightarrow 0
8.: 0.78
                     \rightarrow .78
9:: +012.340 \rightarrow 12.34
```

It reduces the length of the number representation:

- The signs are collapsed and only one minus sign is output if the number is negative (see examples 1, 2, 3, 9).
- Leading zeros are removed (4, 8, 9) unless the number is zero (7).
- The decimal part is omitted, if the number is an integer (5, 7).
- Trailing zeros from the decimal part are stripped (5, 6, 7, 9).

The resulting number representation can be catched with one of the following Perl regular expressions:

- ^0\$ (zero)
- ^-?[1-9][0-9]*\$ (integer)
- ^-?[0-9]*\.[0-9]*[1-9]\$ (real)

This is a valid numeric object of the PDF specification [1, "7.3.3 Numeric Objects"].

\thepdfnumberNormZeroOne

There are various places in the PDF specification where the number is in the domain 0.0 upto 1.0. Macro thepdfnumberNormZeroOne automatically adjusts the number to fit into that range. Negative numbers are mapped to 0 and numbers greater than one are replaced by 1. Thus the result fits one of the following regular expressions:

- ^0\$
- ^\.[0-9]*[1-9]\$
- ^1\$

Examples:

```
\begin{array}{lll} -456 & \rightarrow 0 \\ -0.001 \rightarrow 0 \\ 0.0 & \rightarrow 0 \\ 0.010 & \rightarrow .01 \\ 0.456 & \rightarrow .456 \\ 1.0 & \rightarrow 1 \\ 01.001 \rightarrow 1 \\ 4 & \rightarrow 1 \end{array}
```

1.4 Input number

The user macros expect a number as argument. The number can either be given explicitly or as macro that expands in one step to an explicit number, because the first token of the argument is expanded once.

The explicite number consists of

- optional signs '+' and '-',
- digits '0' upto '9' and
- an optional dot '.'.

All tokens must have catcode 12 (other), the default catcodes for these characters in LaTeX, plain TeX or iniTeX. As Perl regular expression the number is expected in one of the following forms:

- ^[+-]*[0-9]+\$
- ^[+-]*[0-9]*\.[0-9]*\$

At least one digit or the dot must be present.

1.5 Error handling

The package is not intended for validating numbers or to decide if an argument is a number. Therefore it is an usage error to use the user macros with arguments that are not explicite numbers as specified in the previous sections. Nevertheless some error conditions are sometimes recognized. Errors are given in form of an undefined command sequence. It is the only way to notify TEX in expandable context. Expanding to some error text would invalidate the output. Currently the following errors are thrown:

\thepdfnumber@ErrorEndMarker: Internally the argument parsing uses an end marker that is never called directly. If it is called with valid user input, then this is a bug. Otherwise it means the user input contains nasty stuff.

\thepdfnumber@ErrorUnexpectedEnd: The macros expect at least one digit or the dot, otherwise if the argument is empty or only contains signs, then this error is called.

\thepdfnumber@ErrorInvalidToken: It is called if the number contains other tokens than signs, digits or the dot or the token at the wrong place (e.g. a sign after a digit). In case of \thepdfnumberNormZeroOne this error condition might not always be detected, because the number parsing might stop at an early point, when the result is already clear (e.g. if the number is negative or will be greater than one).

Improper alphabetic constant: This error might be thrown by T_EX, if the number contains command tokens instead of characters.

2 Implementation

```
1 (*package)
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with LATEX.

```

3 Installation

3.1 Download

561 (/package)

\ThPdNu@ReturnFracNumber

ThPdNu@ReturnFracNumberInvalid

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/thepdfnumber.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/thepdfnumber.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:pkg/tds). Directories with texmf in their name are usually organized this way.

¹CTAN:pkg/thepdfnumber

3.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

3.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T_FX :

```
tex thepdfnumber.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
thepdfnumber.sty \rightarrow tex/generic/oberdiek/thepdfnumber.sty thepdfnumber.pdf \rightarrow doc/latex/oberdiek/thepdfnumber.pdf thepdfnumber.dtx \rightarrow source/latex/oberdiek/thepdfnumber.dtx
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

3.4 Refresh file name databases

If your T_EX distribution (T_EX Live, MiKT_EX, ...) relies on file name databases, you must refresh these. For example, T_EX Live users run texhash or mktexlsr.

3.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain T_FX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{thepdfnumber.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex thepdfnumber.dtx
makeindex -s gind.ist thepdfnumber.idx
pdflatex thepdfnumber.dtx
makeindex -s gind.ist thepdfnumber.idx
pdflatex thepdfnumber.dtx
```
