The rotchiffre package

Heiko Oberdiek*

2016/05/16 v1.1

Abstract

This package implements chiffres ROT13 with its variants ROT5, ROT18, and ROT47.

1 Documentation

1.1 Motivation

In the newsgroup comp.text.tex there was a discussion [1] about package fontspec. Stephan Hennig provided an example to implement ROT13 as Open-Type feature [2]. And Robin Fairbairns requested a CTAN upload [3] ©.

But I think it would be not fair to the users of old TeX engines without OpenType support that they will not be able to decrypt texts generated by the new package ©. Therefore I have written this package that implements ROT13 even for iniTeX. Also other variants ROT5, ROT18, ROT47 are provided.

1.2 Usage

```
\EdefRot \{\langle type \rangle\}\ \{\langle cmd \rangle\}\ \{\langle text \rangle\}
```

The $\langle text \rangle$ is expanded and sanitized. All tokens are letters with catcode 12 (other) with the exeption of the space token that has character code 32 (0x20) and catcode 10 (space). This follows T_EX's convention of \string and \meaning.

The chiffre type is specified by $\langle type \rangle$ it takes a number. For example, ROT13 is specified by 13. The selected chiffre is applied to $\langle text \rangle$ and the result is stored in macro $\langle cmd \rangle$.

The following table lists the supported rotation chiffres.

chiffre	$_{ m from}$	to
ROT13	A-Z	N-Z A-M
	a-z	n-z a-m
ROT5	0-9	5-9 0-4
ROT18	A-Z 0-9	S-Z 0-9 A-R
	a-z	n-z a-m
ROT47	!-~	P-~ !-0

In case of ROT47 the range is the ASCII range from character codes 33 (0x21) '!' upto 126 (0xFE) '~'.

The specifications of the algorithms are taken from the description in Wikipedia [4, 5], ROT18 is further specified by "computerfreak" [6].

1.2.1 Examples

The famous English pangram [7] is converted by

\EdefRot{13}\result{The quick brown fox jumps over the lazy dog}

The result is stored in macro \result with the following contents:

Gur dhvpx oebja sbk whzcf bire gur ynml qbt

Command names are converted to strings before. Therefore the text should not contain T_FX markup, example:

But macros can be used that contain text. They are expanded.

2 Implementation

```
1 (*package)
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with LATEX.

```

2.4 \EdefRot as robust macro

The main macro \EdefRot is made robust if ε -TeX or LATeX are present.

\EdefRot

```
122 \ltx@IfUndefined{protected}{%
    \ltx@IfUndefined{DeclareRobustCommand}{%
124
       \def\RotCh@temp{\def\EdefRot##1}%
125
       \def\RotCh@temp{\DeclareRobustCommand*\EdefRot[1]}%
126
    }%
127
128 }{%
     \def\RotCh@temp{\protected\def\EdefRot##1}%
129
130 }
131 \RotCh@temp{%
     \RotCh@GetNumber{#1}%
132
     \ltx@IfUndefined{RotCh@rot@\romannumeral\RotCh@number}{%
133
       \@PackageError{rotchiffre}{%
134
         Unknown chiffre ROT\RotCh@number
135
136
       }\@ehc
137
       \EdefSanitize
     }{%
138
       \RotCh@rot
139
    }%
140
141 }
```

\RotCh@GetNumber If ε -TeX is active, then the chiffre number can be an expression supported by \numexpr.

```
142 \ltx@IfUndefined{numexpr}{%
143
     \def\RotCh@GetNumber#1{%
       \edef\RotCh@number{\number#1}%
144
    }%

```

2.7 \RotCh@rot with big char support

Some modern TEX engines support characters with more than eight bits (codes greater as 255). LuaTEX and XETEX are detected by the caret notation that is extended by these engines.

```

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/rotchiffre.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/rotchiffre.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

```
CTAN: install/macros/latex/contrib/oberdiek.tds.zip
```

TDS refers to the standard "A Directory Structure for TeX Files" (CTAN:pkg/tds). Directories with texmf in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

3.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain TeX:

```
tex rotchiffre.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
\label{eq:control_control_control} \verb|rotchiffre.sty| \rightarrow tex/generic/oberdiek/rotchiffre.sty| \\ \verb|rotchiffre.pdf| \rightarrow doc/latex/oberdiek/rotchiffre.pdf| \\ \verb|rotchiffre.dtx| \rightarrow source/latex/oberdiek/rotchiffre.dtx| \\ \end{aligned}
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

¹CTAN:pkg/rotchiffre

3.4 Refresh file name databases

If your TEX distribution (TEX Live, MiKTEX, ...) relies on file name databases, you must refresh these. For example, TEX Live users run texhash or mktexlsr.

3.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{rotchiffre.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

\PassOptionsToClass{a4paper}{article}

An example follows how to generate the documentation with pdfIAT_FX:

```
pdflatex rotchiffre.dtx
makeindex -s gind.ist rotchiffre.idx
pdflatex rotchiffre.dtx
makeindex -s gind.ist rotchiffre.idx
pdflatex rotchiffre.dtx
```
