# The iflang package

### Heiko Oberdiek\*

## 2018/01/21 v1.7

#### Abstract

This package provides expandible checks for the current language based on macro \languagename or hyphenation patterns.

#### 1 Documentation

Package babel defines \iflanguagename. As first argument it takes a language name and executes the second or third argument depending on the current language. This language test is based on hypenation patterns. However, it is possible that different languages or dialects share the same patterns. In such cases \iflanguagename fails.

However, package babel and some other packages such as german or ngerman store the language name in the macro \languagename if \selectlanguage is called.

#### \IfLanguageName $\{\langle lang \rangle\}\ \{\langle then \rangle\}\ \{\langle else \rangle\}$

Makro \IfLanguageName compares language  $\langle lang \rangle$  with the current setting of macro \languagename. If both contains the same name then the  $\langle then \rangle$  part is called, otherwise the  $\langle else \rangle$  part.

The macro is expandable. Thus it can be safely used inside  $\ensuremath{\mathtt{def}}$  or  $\ensuremath{\mathtt{csname}}$ . If case of errors like an undefined  $\adjustless$  part is executed.

Note: Macro \IfLanguageName relies on the fact, that \languagename is set correctly:

#### Package babel:

Full support of \languagename in its language switching commands.

#### Format based on babel (language.dat):

If package babel is not used (or not yet loaded), then babel's hyphen.cfg has set \languagename to the last language in language.dat, but \language (current patterns) is zero and points to the first language. Thus the value of \languagename is basically garbage. Package iflang warns if \languagename and \language do not fit. This can be fixed by loading package babel previously.

#### Format based on $\varepsilon$ -T<sub>E</sub>X's etex.src (language.def):

Unhappily it does not support \languagename. Thus this package hooks into \uselanguage to get \languagename defined and updated there. At package loading time the changed \uselanguage has not been called yet. Thus package iflang tries USenglish. This is the definite default language of etex.src. If the current patterns suit this default language, an undefined \languagename is set to this language. Otherwise a \languagename remains undefined and a warning is given.

#### \IfLanguagePatterns $\{\langle lang \rangle\}\ \{\langle then \rangle\}\ \{\langle else \rangle\}$

This macro behaves similar to \IfLanguageName. But the language test is based on the current pattern in force (\language). Also this macro is expandable, in case of errors the  $\langle else \rangle$  part is called.

The following naming convention for the pattern are supported:

```
\textbf{babel/language.dat} : \texttt{\local{language}{language}{}}
```

etex.src/language.def :  $\langle language \rangle$ 

Package iflang looks for \et@xpatterns (defined in etex.src) to find out the naming convention in use.

### 2 Implementation

```
1 (*package)
```

#### 2.1 Reload check and package identification

Reload check, especially if the package is not used with LATEX.

156 \fi
```

#### 2.2.4 Support for etex.src

#### \IfLang@prefix

```
157 \begingroup\expandafter\expandafter\expandafter\endgroup
158 \expandafter\ifx\csname et@xpatterns\endcsname\relax
159
     \@PackageInfoNoLine{iflang}{%
       Naming convention for patterns: babel%
160
161
     \def\IfLang@prefix{1@}%
162
163 \else
     \@PackageInfoNoLine{iflang}{%
164
165
       Naming convention for patterns: etex.src%
166
     \def\IfLang@prefix{lang@}%
167
     \let\IfLang@OrgUseLanguage\uselanguage
168
     \def\uselanguage#1{%
169
       \edef\languagename{#1}%
170
171
       \IfLang@OrgUseLanguage{#1}%
172
     }%
```

The first \uselanguage that is executed as last line in language.def cannot patched this way. However, language.def is very strict. It forces the first added and used language to be USenglish. Thus, if \languagename is not defined, we can quite safely assume USenglish. As additional safety precaution the actual used patterns are checked.

```

214 \else
215 \expandafter\@secondoftwo
216 \fi
217 {%
```

We do not have \pdf@strcmp (and \pdfstrcmp). Thus we must define our own expandable string comparison. The following implementation is based on a TeX pearl from David Kastrup, presented at the conference BachoTeX 2005: http://www.gust.org.pl/projects/pearls/2005p/david-kastrup/bachotex2005-david-kastrup-pearl1.pdf

The original code allows macros inside the second string. Because also \languagename might consists of further macros, we need a variant that allows macros in the first string, too.

### 3 Installation

#### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

<sup>1</sup>CTAN:pkg/iflang

CTAN:macros/latex/contrib/oberdiek/iflang.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/iflang.pdf Documentation.

**Bundle.** All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

```
CTAN:install/macros/latex/contrib/oberdiek.tds.zip
```

TDS refers to the standard "A Directory Structure for TeX Files" (CTAN:pkg/tds). Directories with texmf in their name are usually organized this way.

#### 3.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

#### 3.3 Package installation

**Unpacking.** The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain  $T_EX$ :

```
tex iflang.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
iflang.sty \rightarrow tex/generic/oberdiek/iflang.sty iflang.pdf \rightarrow doc/latex/oberdiek/iflang.pdf iflang.dtx \rightarrow source/latex/oberdiek/iflang.dtx
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

#### 3.4 Refresh file name databases

If your TEX distribution (TEX Live, MiKTEX, ...) relies on file name databases, you must refresh these. For example, TEX Live users run texhash or mktexlsr.

#### 3.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain T<sub>E</sub>X: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{iflang.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

\PassOptionsToClass{a4paper}{article}

An example follows how to generate the documentation with pdfIAT<sub>F</sub>X:

```
pdflatex iflang.dtx
makeindex -s gind.ist iflang.idx
pdflatex iflang.dtx
makeindex -s gind.ist iflang.idx
pdflatex iflang.dtx
```

### 4 Acknowledgement

I wish to thank:

Markus Kohm Useful hints for version 1.2.

### 5 History

### [2007/04/10 v1.0]

• First public version.

### [2007/04/11 v1.1]

• Line ends sanitized.

### [2007/04/12 v1.2]

- Initialization of \languagename in case of etex.src.
- Some sanity tests added.
- Documentation improved.

### [2007/04/26 v1.3]

• Use of package infwarerr.

# [2007/09/09 v1.4]

- $\bullet \ \, {\rm Bug \ fix: \ \ } \ \, {\rm IfLang@StrEqual} \ \to \ \, {\rm IfLangStrEqual} \ \, ({\rm Gabriele \ Balducci}).$
- Catcode section rewritten.

# [2007/11/11 v1.5]

• Use of package pdftexcmds for LuaTFX support.

# [2016/05/16 v1.6]

• Documentation updates.

# [2018/01/21 v1.7]

• Fix test for etex.src.

### 6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
