NAME

t1ascii − convert PostScript Type 1 font from binary to ASCII

SYNOPSIS

t1ascii [**−l** *length*] [*input* [*output*]]

DESCRIPTION

t1ascii converts Adobe Type 1 font programs in PFB (binary) format to PFA (hexadecimal) format. If the file *output* is not specified output goes to the standard output. If the file *input* is not specified input comes from the standard input.

OPTIONS

−−line−length=*num*, **−l** *num*

Set the maximum length of encrypted lines in the output to *num*. (These are the lines consisting wholly of hexadecimal digits.) The default is 64.

−−warnings, **−w**

Warn when the input font contains lines longer than 255 characters. Long lines don't strictly conform to Adobe's Document Structuring Conventions, and may cause problems with older software.

SEE ALSO
